Mohamed Alhaskir

AI Researcher | Research Engineering, Multimodal AI

AI researcher and PhD candidate at RWTH Aachen University with experience designing, implementing, and evaluating end-to-end AI systems. Research spans multimodal LLM applications, deep learning for physiological time series, and predictive modeling. Experienced in reproducible ML experimentation, model evaluation, GPU-based research workflows, and developing AI systems for real-world applications.

RESEARCH & ENGINEERING EXPERIENCE

PhD Researcher, Institute of Medical Informatics, RWTH Aachen University 2022 – Present

Aachen, Germany

HaMoJo: LLM and Computer Vision System for Structured Feedback | github.com/Mohamed-Alhaskir/HaMoJo

- Developed an end-to-end research pipeline that integrates speech recognition, speaker diarization, computer vision, and locally hosted LLMs to generate structured feedback from recordings of medical students' simulation training. The system includes rubric-based scoring, programmatic validation, and reproducibility controls.

  My contribution: System architecture, multimodal pipeline implementation, LLM evaluation methodology, and reproducibility engineering.

MoniPy: Deep Learning for Reliable Seizure Detection Using Wearable ECG | github.com/rwth-imi/monipy

- Developed a wearable ECG seizure-detection pipeline combining physiological signal processing, automated data-quality assessment, and deep learning. Evaluated using subject-independent validation in a multicenter clinical study, with an emphasis on signal quality, model reliability, and generalization across patients.

  My contribution: data processing, algorithm design, implementation, and evaluation; first author of the study.

FORECAST: Foundation Models for Hospital Patient Flow Prediction (ongoing research)

- Applying foundation models to routine emergency department data to predict inpatient ward admission and subsequent length of stay, alongside research into emergency department crowding prediction.

  My contribution: study design, model development, and evaluation.

Master's Researcher, Forschungszentrum Jülich (IBI-3) 2021 – 2022

- Master's thesis on spike-waveform variability in 3D microelectrode array recordings of neuronal cultures; developed signal-processing algorithms and optimized the SpyKING CIRCUS spike-sorting pipeline.

Research Internships, Charité Berlin and RWTH Aachen 2020 – 2021

- Charité Berlin, AG Klinische Neurotechnologie: signal-acquisition and decoding algorithms for an OPM-MEG-based brain-computer interface.
- RWTH Aachen, Molecular & Systemic Neurophysiology: classification algorithms for neural decoding of wide-field calcium-imaging data.

TECHNICAL SKILLS

Programming	Python, SQL, Bash, MATLAB
Machine Learning	PyTorch, TensorFlow/Keras, scikit-learn, Hugging Face Transformers, LoRA fine-tuning
LLMs & Multimodal AI	vLLM, llama.cpp, Whisper, speaker diarization, MediaPipe, OpenCV
ML Evaluation	Model performance evaluation, reproducible experimentation, data-quality assessment
ML Engineering	Git, pytest, Docker, MLflow, Weights & Biases, FastAPI
Computing	Slurm, HPC environments, GPU-based experimentation

Data & Statistics	pandas, NumPy, SciPy, statsmodels, SQLAlchemy/MySQL
Languages	Arabic (native), German (C2), English (C1)

EDUCATION

PhD, Medical AI, RWTH Aachen University — 2022 – 2027 (expected)
Institute of Medical Informatics · Aachen, Germany

MSc, Biological Information Processing, RWTH Aachen University — 2019 – 2022
Major: Biophysics · Aachen, Germany

BSc, Biological Information Processing, RWTH Aachen University — 2016 – 2019
Aachen, Germany

AWARDS & LEADERSHIP

DAAD Prize for Outstanding International Students, RWTH Aachen, 2021

Co-Founder, NeuroTX Aachen e.V., 2020–2022

Developed a brain-computer interface prototype for electric wheelchair control; project funded by the RWTH Aachen Collective Incubator.
